

BlackMirror MVP Feedback/Peer Evaluations

We asked our peers to fill out this [form](#) and got the following responses:

<p><i>What information do you think would be useful to see/share in a BlackMirror General Profile?</i></p>	<p><i>Rate the ease of use of the application (i.e. was it easy to understand what to do? how it worked?)</i></p>	<p><i>What did you enjoy about the AR experience?</i></p>	<p><i>What did you dislike about the AR experience? And how would you suggest to fix it?</i></p>	<p><i>Currently our target product will include:</i></p> <ul style="list-style-type: none"> - Building your own profile via a Google Form - Re-vamping the UI of the profile - Introducing an auditory or visual cue that you have scanned a QR-Code <p><i>What other features (if any) would you like to see in the final product?</i></p>
<p>name, profession, description of what they do, what they are looking for if anything</p>	<p>7</p>	<p>it was simple to use and the purpose of it was obvious</p>	<p>The scroll bar was probably the part i disliked the most since it just felt clunky and it was annoying to use. Maybe make the entire page scrollable so you don't need a precise click.</p>	<p>possibly a history of people you have scanned so you can look back at information</p>
<p>LinkedIn type of content, small and bulleted, can't read too much content at once</p>	<p>6</p>	<p>It was nice that it felt like I was still in the real world, just with a little information (the lack of content on the screen helped with this)</p>	<p>Biggest thing is confirmation when someone scans a QR code that it was done successfully. A sound or "Scanned!" small pop-up would be good.</p>	<p>Favoriting people that you had really good conversations with ("Star" button)</p>

current career goal, what job I'm looking for, extracurricular interests	7	Very reliable scanning on QR code	The information pane was a bit boring	picture! keep the fun facts.
Name, Education, Experience, Portfolio, what roles you are looking for, etc.	8	I enjoyed that the profile was readable and that the profile moved with you. I also enjoyed that the QR codes worked!	I didn't like how close I had to get to the QR code. I also wish I could maybe resize the profile or chose where it goes (like maybe always to the left of a person).	That sounds great for the final product! I would say another feature that would be awesome would be able to add more features to personalize your profile like you can choose the font, color, etc.
Career Goals; Interests; Passions	7	I liked that the window followed you around and that you could scroll through the information.	I didn't like that I didn't know how to begin and wether or not the QR Code was scanning.	QR Code scanning and loading indications; options to freeze the location of the window
NA	7	Scanning process is so fast.	Hard to drag or rotate the panel	Have more detailed info in the profile. I wonder how you could fit all resume information into the current profile.
Just some keywords? so that more can happen in the conversation		QR code scanning is smoother than I expected	Maybe we don't need the "open profile" option. When you scan a code with your phone, it automatically opens a website; the button is kinda small and hard to press.	Fix the profile to a position and don't crop the file as my head moves Maybe the profile can have multiple pages and each focus on one item

We also took the following notes on other feedback we received:

- Save option would be good
- favorite profile feature
- Fix so that button/profile is in peripheral vision
- Adding hand menu to see favorite people
- Have access to favorited profiles post event
- Having a sound/indication of button being clicked -
- Add an “welcome” menu or some indication that you are within the app
- Take notes on interaction with them maybe pinning - favorites button would be a good way to move it to a folder
- Likes the fun fact
- photo in profile for when we pull it up later
- QR code associated profile, does not follow head
- Contact information, create contact book
- Video of project you worked on, photos, visual references
- Profile next to the person when opening it up
- Instructional hints, instructional menu of some kind
- Button replaces the QR code that exists
