

# BlackMirror: MVP

## Midterm Presentation

Kevin, Mariya, Nour, and Zage

# WHAT WE WANT

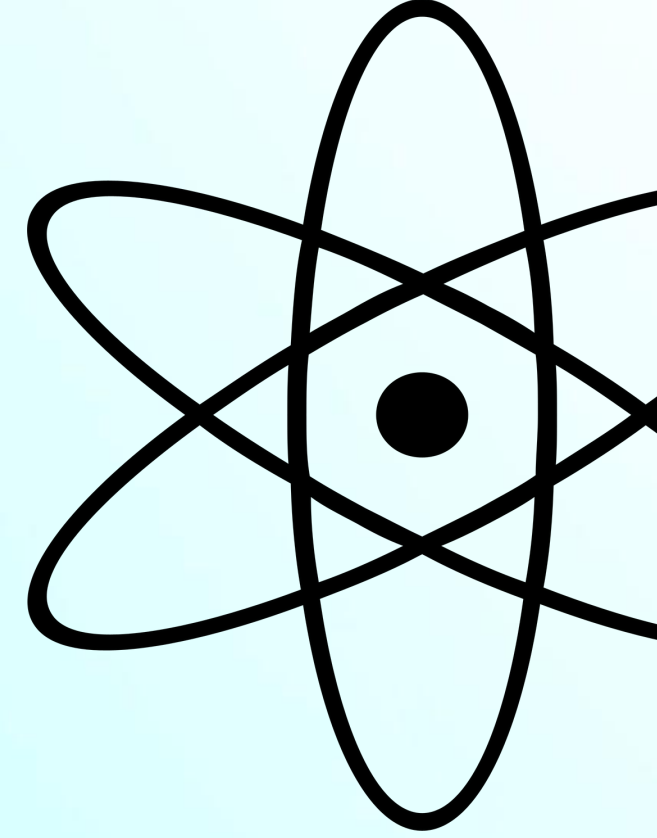

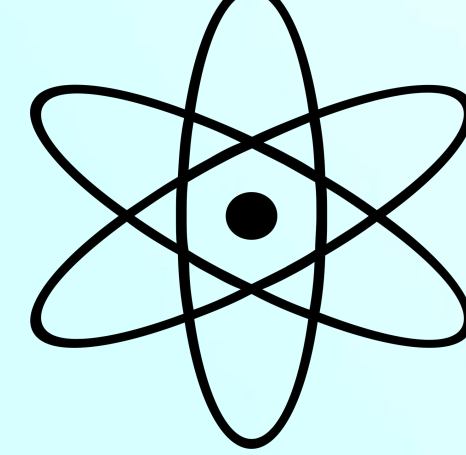

# WHERE WE ARE

We have addressed privacy concerns brought up last time:

- Users will create their own opt-in profile instead of scraping social media
- Scrapped Facial Recognition & decided to use opt-in QR codes

## QR Code Tracking

- Scans QR code and creates a clickable object representing it
- Click object to access data from QR code (open link, open user profile)
- Clears old QR code scans on new launch

## Visual Profile

- Takes the number generated by the QR code and finds the persona associated with it via a JSON file
- Loads the correct data to the basic profile (in this case the person's name, grade, and fun fact)
- The profile is interactive, meaning one can open and close it

# NEXT STEPS

## Fix Bugs + Enhance

Fix bugs & edge cases associated with QR code tracking, plus enhance our visual profile

## Testing Feedback

Receive feedback and iterate our design

## Polish

Polish user experience and performance
